MPW: Problem with replace command in shell

=====

In the shell of MPW 1.0, 1.0.1, and 1.0.2, there's a problem using the replace command to change the tag operator (option-r). The error message '### replace - Invalid Option-r statement.' results from using either of two commands,

```
replace /'Option-r'/ 'Option-r'  
or  
replace /Option-dOption-r/ 'Option-r',
```

where the first Option-r in each line is the tag operator and the Option-d is the shell escape character.

To work around the situation, use two commands,

```
Find /'option-r'/  
and  
Replace option-6 option-r
```

where the first option-r is is really the tag symbol, option-6 is really the selection symbol, and the second option-r is really option-r.
