Apple IIc: Serial port interfacing (2 of 2)

=======================================================================

Port 2 uses the same commands, with the differences and additions listed below.
Each command for Port 2 must be preceded by a CTRL-A.

  nnn      same

  nnB      same

  nD       same

  I        same

  K        same

  L        same

  nP       same

  Q        Quit Terminal Mode

  R        same

  S        same

  T        Enter Terminal Mode.  Use this command after IN#2 only.
           If you follow this command by PR#2, the IIc will echo
           input to output. (NOTE: If the other device is also
           echoing input to output, entering the first character
           will cause an infinite loop.  Use CTRL-RESET to get
           out.

  Z        same

  CTRL-T   When issued from a remote device, this command puts
           the IIc in terminal mode if IN#2 is already in
           effect.  The command is the same as CTRL-T typed
           locally.
```

CTRL-R When issued from a remote device, this command
        undoes the terminal mode command. If IN#2 and PR#2
        are in effect, the remote keyboard and display
        become the input and output devices of the local
        IIc. The command is the same as CTRL-A Q typed
        locally.
