Macintosh II: Pinouts for Sony CPD-1302 Color Monitor (8/94)

Article Created: 11 September 1989
Article Reviewed/Updated: 05 August 1994

TOPIC -----

This article documents how to connect a Sony CPD-1302 display to a Macintosh.

DISCUSSION -----

To hook a Sony Multiscan (CPD-1302) monitor to a Macintosh II, make an adapter cable from the video card to the monitor (which has a 9-pin D connector).

Here is the pin out description for the adapter cable, using the automatic sync-on-green configuration:

Macintosh DB-15 Pin	Sony DB-9	Signal Name
-----	----	-----
1	1	Ground
2	3	Red
5	4	Green
9	5	Blue
15	8	HSync
12	9	VSync

Pins 7 & 10 can be tied together for VGA Extended Sense Code.

This allows the monitor to support 640x480 VGA and 800x600 SVGA resolutions.

Article Change History:

05 Aug 1994 - Changed pinouts to make it easier to connect to Macintosh computers which provide VGA support.
