Apple IIGS: Entering the Control Panel

===

This article last reviewed: 21 September 1987

On page 13, the Apple IIGS Owner's Guide (Apple Computer Inc., 1986, part no. 030-1292-A) says that holding down the Option key while turning on power to the computer takes you to the Control Panel. This doesn't always work.

Here are two other ways to access the Control Panel:

- Press Option-Control-Reset.

- Choose Quit from the Finder's File menu, then hold down the Option key while restarting the computer from the Start Next Program display.
