DOS 3.3: Nonstop catalog

=====================================================================

The Catalog command stops every 18 lines, allowing you to read the
information on the screen before continuing.  Vary this pause by changing
three bytes in memory.  In a 48K Apple:

```
        poke 44601,234
        poke 44602,234
        poke 44603,234
```
