Scribe Printer: Graphics Dumps

======================================================================

You can use two versions of the Imagewriter Toolkit to dump graphic images to
the Scribe printer.  The original version, written under DOS, dumps graphic
images created under DOS. The new version, written under ProDOS, works with
ProDOS images. If you want to use the ProDOS version to print DOS graphic
images, convert your DOS files to ProDOS with the Convert utility included on
the ProDOS Users Disk.
