LisaWrite 2.0: Landscape Printing

=====

There is a problem printing in Landscape mode in LisaWrite 2.0. Missing and partly formed characters are printed in the upper right portion of a write document printed 'while you wait'. (Versions 3.0 and 3.1 of Lisa 7/7 don't give you the option of printing 'while you wait', so the problem doesn't occur with these versions.)

The workaround is to print 'while you work'.
