Silentype: Pinouts (10/94)

===

Article Created: 26 October 1987
Article Reviewed/Updated: 12 October 1994

TOPIC ---

This article documents the pinout configuration and signal name for the Apple
SilenType printer.

DISCUSSION --

```
  DB-9
Connector    Signal Name
------------------------
    1          Shield Ground
    2          +5 volts
    3          Logic Ground
    4          Serial Data
    5          Machine Status
    6          +12 volts
    7          Power Ground
    8          Store Clock
    9          Shift Clock
```

The Silentype Printer needs its own specially designed interface card, or an
Apple III with the built in Silentype port. It is not possible to connect it to
any other type of interface card.
