Lisa Pascal: Printing text from a program

===

Here is an example illustrating printing from a Pascal program:

```
program Print__Output;
  var OutFile: text;

begin
  Rewrite (OutFile, '-printer');  {Declare the printer as a file named OutFile}
  Writeln (OutFile, 'This is a test.')  {Output goes to the printer}
  Close (Outfile)  {Close the file "printer"}
end. {Print_Output}
```
