Jazz: Communicating with the Apple Modem

=====

When using Jazz communications with an Apple modem you cannot use the settings 7 Data Bits and NONE Parity - The modem will not dial. You should use 7 and EVEN or 8 and NONE. On our Apple 1200 modem we use the DIP switch settings of 1-DOWN 2-UP 3-UP.

Note: When trying to dial from a business phone that requires a 9 to get out remember to put it in your modem settings. Example 9,6172379898 this would be how you type in the number for a long distance call from a business phone.
