Asynchronous LaserWriter Driver 4.0: A Description

=====

Article Created: 15 January 1988
Article Last Reviewed: 31 October 1991
Article Last Updated: 31 October 1991

TOPIC -----

This article describes Apple's asynchronous LaserWriter driver.

DISCUSSION -----

Apple has an Asynchronous LaserWriter Driver 4.0 that allows remote locations to access a LaserWriter by modem, or access directly-connected printers by the serial port. Its built-in language (called "Asynchronous Connection Language") lets you customize connection scripts.

This driver is available from APDA, the Apple Programmers and Developers Association, and another version is available through Northern Telecom for use with their SL-1 system.
