Multiplan 1.02, 1.01 and 1.0: Inserting a row

=====

This article last reviewed: 21 April 1986

Q. I am trying to insert a row with Multiplan and it doesn't insert. Why?

A. When you select the last cell (from the Select menu), and the selected cell ends up being in row 255, Multiplan thinks you are using this entire area and that there are no more rows to insert. Select all rows (by pointing to the row numbers) beyond the actual working area of the document and use the Cut command to remove them. You will then be able to insert rows. This is most commonly caused by formatting entire columns rather than just the cells used.
