IEEE-488 Interface Card: Internal Cable Pinouts (11/96)

Article Created: 21 April 1996
Article Reviewed/Updated: 14 November 1996

TOPIC -----

Listed below are the pinouts for the IEEE cable.

DISCUSSION -----

As both connectors are mass terminate type connectors, the pinouts are straight through, with the following exceptions:

Card 26-pin internal connector	24-pin external connector
pin	pin
12 no connection	12 separate ground *
25 no connection	
26 no connection	

* Grounding occurs with a special connection to pin 12 on the external connector. This special wire leads from pin 12 on the external connector to system or chassis ground as pictured on page 6 of the IEEE card manual. The wire must NOT be connected to the ground signal of the card or the slot.
