Apple IIGS Incompatibilities: No Apple IIe auxiliary slot

==

This article last reviewed: 17 September 1986

The Apple IIGS is designed to be used with the vast majority of Apple IIe hardware and software. However, there are some design differences that will cause some products to be incompatible with the Apple IIGS.

Any card that is used in the Apple IIe auxiliary slot cannot be used on an Apple IIGS, since there is no auxiliary slot in the IIGS, and no other IIGS slot has the signals present in the Apple IIe's auxiliary slot.
