ImageWriter I & II: Same Documents Print Differently (9/95)

=====================================================================

Article Created: 8 February 1988
Article Reviewed/Updated: 19 September 1995

TOPIC -------------------------------------------------------

Why do the ImageWriter I and ImageWriter II sometimes produce differing results,
even though both are working from the same document?

DISCUSSION --------------------------------------------------

The following are some possible reasons this could happen:

- Screen fonts print differently with different system versions. Use the
  font and ImageWriter driver that best suits your needs.

- MacDraw or MacPaint documents that print perfectly on ImageWriter I may
  show a horizontal white line when printed on ImageWriter II. This is
  because ImageWriter II has smaller print head wires, which allow the
  Imagewriter II to produce a finer text quality. The white line is caused
  by the finer dots failing to overlap. This can be fixed by printing in
  BEST mode.
