HyperCard: How to Open a Stack That Closes Itself

=====

This article last reviewed: 22 January 1988

If you find that you've accidentally created a HyperCard stack that closes itself immediately upon opening -- and you can't edit it to correct the problem, here's a way to force it to stay open.

In your home stack, make a button with this script:

```
on mouseUp
    set lockmessages to true
    go to stack "xyz"
end mouseUp
```

where "xyz" is the name of the problem stack. This will open the stack and leave you at the first card.
