TOPIC ---

Can the RFT (Revisable Form Text) converters be used to interchange files
with DisplayWrite 370 running on an IBM mainframe running VM/CMS?

DISCUSSION --

Apple's compatibility guarantee only applies to characters and codes
present in DisplayWrite 3/4 and DisplayWrite 370. These three IBM programs
are not totally compatible with one another. This is particularly true in
their use of formatting control codes and ASCII-Extended Character Set.
