LaserWriter: Bold Symbol Font Can't Be Printed

==

This article last reviewed: 31 August 1988

There is no way to print the Symbol font in bold when using a standard text editor.

It is possible to do this by manipulating the Symbol font information through PostScript, but this is not simple or practical.

Adobe Illustrator allows manipulation of the Symbol font in a variety of ways, but Adobe says that no bold version of Symbol is currently available.
