System 6.0.2: Incompatible With SoftPC v1.2

=====

This article last reviewed: 11 November 1988

SoftPC v1.2 is incompatible with System 6.0.2. When launching SoftPC under MultiFinder, the application unexpectedly quits. When the application is relaunched, an "illegal instruction encountered" error message is received. If you click the Reset button at this point, SoftPC starts up and runs without any problems.

The current version of SoftPC, v1.2.1, corrects the problem. To upgrade your copy of SoftPC, provide Insignia Solutions with the serial number of your SoftPC software, your name, and mailing address.

For more information, search on "Insignia Solutions".
