Inter•Poll: Type "ApTk" Explained

==

This article last reviewed: 21 January 1989

Inter•Poll type "ApTk" is an AppleTalk Name Binding Protocol device type,
the types listed by Inter•Poll.

The AppleTalk name/type "ApTk" is generated by Font/DA Juggler Plus as part
of its copy protection scheme. It looks on the network for other "ApTk"s and
checks to see if they have the same serial number. If one of them does, it
won't run.
