LaserWriter IINTX: Can't Prevent Change Of Settings On Network

==

This article last reviewed: 20 January 1989

If you are using a LaserWriter IINTX on a local area network, there is
currently no way to protect the hardware settings from being overridden by a
PostScript program downloaded from one of the workstations.

Anyone who has access to the LaserWriter IINTX over the network can change
the settings via a PostScript program.
