Macintosh IIcx: Some NuBus Cards Don't Fit

=====

Article Created: 23 May 1989
Article Last Reviewed: 10 July 1992
Article Last Updated:

TOPIC -----

Does the smaller form factor of the Macintosh IIcx affect the size of NuBus cards? In other words, will cards designed for the Mac II fit inside a IIcx?

DISCUSSION -----

There are two NuBus cards that have problems fitting in a Macintosh IIcx. Both are video cards: the SuperMac Spectrum 8-bit color card and Truevision NuVista 24-bit color card. Apple has been unable to verify whether or not the DCA MacIrma card fits properly in the Macintosh IIcx. We will try to provide more information as it becomes available.

Note: Any NuBus card designed to the physical specifications published by Apple will fit properly in a Macintosh IIcx.
