Tektronix 401x Terminal Emulator for Macintosh

===

This article last reviewed: 22 June 1989

TOPIC --

Is there a Tektronix 401x terminal emulator for the Macintosh that
works over a TCP/IP connection?

DISCUSSION -------------------------------------

InterCon offers a TCP/IP Telnet/ftp product that supports VT240, Tektronix
4010/4014 graphics, and TN3270. Another solution is NCSA Telnet (version
2.2). This application also provides Tektronix 401x emulation, although it
is not as well-advertised as InterCon's. NCSA Telnet is written by the
National Center for SuperComputer Applications at the University of Illinois
at Champaign-Urbana.

For more details, search the Tech Info Library under "InterCon" and "NCSA".
