DAL and TCP/IP in VM Environments (12/94)

===

Article Created: 22 September 1989
Article Reviewed/Updated: 05 December 1994

TOPIC --

I have a question concerning Data Access Language (DAL) and TCP/IP. With the
DAL for VM solution, I normally would have a 3278 emulation terminal with a coax
connection to the cluster controller-FEP-host.

If on the 802.3 backbone we had IBM mainframes and access to them via TN3278
(either NCSA's or Intercon's product), would DAL in the Macintosh connected via
LocalTalk to a FastPath 4 or GatorBox work in this case? The IBM host would
have to be running all of the proper software, and again, the 802.3 cable can
only have IP packets on it.

DISCUSSION --

Dal supports TCP/IP access via Mac TCP to a VM DAL server as of release 1.3.
