LaserWriter II: Using with Windows 2.11

==

This article last reviewed: 2 November 1989

TOPIC ---

This article discusses the correct version of Windows to use with a LaserWriter
II

DISCUSSION --

Microsoft Windows, used in conjunction with a LaserWriter II, sometimes has a
problem of seeing ROM version I instead of PostScript 47, and thus refusing to
print to it.

As of November, 1989, Microsoft UK has informed us that the latest versions of
Windows (v2.11) and its PostScript driver (v3.1) do not suffer from this
problem and will print to a LaserWriter II successfully.
