System 6.0.4: ColorSnap and Macromind Director Compatibilty

=====================================================================

This article last reviewed: 29 January 1990

TOPIC -------------------------------------------------------

Is ColorSnap 32 by Computer Friends and Macromind Director by Macromind
compatible with System Software 6.0.4?

DISCUSSION --------------------------------------------------

Computer Friends Tech Support states that ColorSnap 32 works fine with System
Software 6.0.4.  Since their new systems haven't arrived, they haven't tested
ColorSnap 32 with a Macintosh Portable or Macintosh IIci.

MacroMind released MacroMind Director 1.0.1 the same day that the Macintosh
Portable and Macintosh IIci were announced. Though MacroMind Director 1.0.1 is
compatible with these new systems and System Software 6.0.4, earlier versions
of Director are not. For a free upgrade, contact Macromind.

For more addresses and phone numbers, search the Technical Info library under
"Computer Friends" and "Macromind."
