A/UX: Apple Outline Fonts and the toolboxdaemon (8/95)

==

Article Created: 4 March 1990
Article Reviewed/Updated: 7 August 1995

TOPIC ---

Can I use Apple Outline Fonts in A/UX 1.1 without the toolboxdaemon running?
That is, can I put the routines in libraries?

DISCUSSION --

Support for any of the Macintosh Toolbox features under A/UX requires the use of
the toolboxdaemon. Essentially, the toolboxdaemon provides the equivalent of the
libraries you are referring to. Without the complete Macintosh environment
available, none of the Macintosh calls would function.

Furthermore, A/UX 1.1 and A/UX 1.1.1 do not support Outline Fonts or any of the
new technology target areas as specified in the documentation that has been
released about the new Macintosh System Software directions. This means that the
underlying Font Manager necessary to use Outline Fonts is not available even if
the toolboxdaemon is running.

A/UX 2.0.1 supports the Adobe Type Manager.
A/UX 3.0 fully supports System 7 TrueType outline fonts.
