Using an IBM Mainframe as a Virtual Disks

===

This article last reviewed: 4 January 1990

TOPIC ---

Is there any way to use an IBM 370 series mainframe as a file server?

DISCUSSION --

Sun's NFS (Network File System) runs on IBM 370 series mainframe. This
means that with a Cayman GatorBox the mainframe will work as a virtual
disk. In fact, a customer in Australia is using an IBM 3090 model 600e as
a file server for 400 Macintoshes.
