Aristotle Setup: AppleTalk Slot Assignments (4/97)

=====================================================================

Article Created: 27 March 1990
Article Reviewed/Updated: 02 April 1997

TOPIC -----------------------------------------------------------

The Aristotle Display progrma may generate the error message "AppleTalk must be
installed to run this program" when launched. This article describes a possible
solution to this problem.

DISCUSSION ------------------------------------------------------

This error message can occur when the slot assignments are not correctly set. In
particular, slot 7 needs to be set to "AppleTalk" when running the Aristotle
Display program.

For network startup and general network operations to work correctly, the slot
assignments must set as:

Slot 1 (or Slot 2) = AppleTalk
Slot 7             = AppleTalk
Startup            = AppleTalk

Note: Network startup can take place, most applications can be launched,
programming can take place in Applesoft BASIC and files can be saved on any
available volumes, even though slot 7 is set to "Your Card".
