InitCdev and Virus Detectors May Conflict

=====================================================================

This article last reviewed: 2 April 1990

TOPIC -------------------------------------------------------

I've been using InitCdev 2.0, a freeware INIT management utility.  With the
AppleComm Toolbox on my system, when I invoke InitCdev, it crashes with
ID=17 (package 0 not present--list manager).

Can you explain?

DISCUSSION --------------------------------------------------

Try moving a couple of virus detectors around, so that SAM Intercept loads
before the InitCdev, and Vaccine loads after InitCdev, then the Apple
Communication Toolbox should work fine.
