HyperCard XCMD To Create Business Charts

===

This article last reviewed: 21 May 1990

TOPIC --

I need to make adaptable business charts that run in conjunction with
HyperCard. Any suggestions?

DISCUSSION ---

A set of XCMDs called HyperGraph is available that can generate full-page
business charts in color or black and white.

HyperGraph supports:

- Full-page display

- Color (256/16 million) with individual control for each object

- All fonts available in the System file

- 10 different types of graphs: pie, bar, horizontal bar, line, and point
  charts in color or black and white

- Three dimensional graph generation

- Auto-update between HyperCard and the graphics routines with HyperCard
  (When you modify a field under HyperCard, the graphic is updated
  automatically.)

- 32-Bit QuickDraw

- Screen generator to import text file and generate a HyperCard Card

For further information, send an AppleLink to "VANNIER.A".
