System Folder: Securing With "Secure INIT"

=====

This article last reviewed: 4 June 1990

TOPIC -----

Do you know of any software that I can use to protect my System Folder configuration, so that users can't change it?

DISCUSSION -----

There is a Macintosh program called "Secure INIT" that records a fixed configuration of the System Folder. An option can be enabled that restores this fixed configuration on system Shutdown or Restart. It is also possible to make the System Folder invisible to the user.
