TOPIC ---

I am looking for a Macintosh software package, besides Desktop Express,
that can act as a front end for either Telemail or MCI Mail.

DISCUSSION --

You might be interested in Software Ventures' MicroPhone II (which has an
MCI Mail CCL). Prometheus offers Acknowledge (a toolkit for programming an
interface for MCI Mail and Telemail) and Macknowledge, software for end
users with scripting capabilities. Macknowledge comes with an MCI Mail
button ready to use.

For more information, search on "Software Ventures" or "Prometheus
Products".
