Macintosh SE: Products for NTSC Output

=====

This article last reviewed: 4 September 1990

TOPIC -----

Can a Macintosh SE or Macintosh SE/30 use a TV as a display device? If yes, what components are needed?

DISCUSSION -----

We searched the Redgate Buyer's Guide Library using "Macintosh and NTSC" as a search string and found a number of articles on this subject. Read the following articles in the Redgate library to find the product(s) that best suits your needs.

- VideoShow
- DisplayServer SE-TV
- MegaScreen SE Dual-Page Rival Monochrome Display System
- D5-SCX Video Scan Converter
