A/UX: Solution to "mount:<fileSystem> no such file or directory"

===

This article last reviewed: 15 October 1990

TOPIC ---

I'm trying to mount a file system and keep getting the error:

    mount: <file system> no such file or directory

DISCUSSION --

Be sure that the file system you specify really exists.

1) Is the file system pathname spelled correctly?

2) Is the directory pathname you specified actually there?
