B-trieve: There's No Equivalent for the Macintosh

=====

This article last reviewed: 19 November 1990

TOPIC -----

Do you know of a B-trieve equivalent for the Macintosh? I would like to port DOS applications to the Macintosh using B-trieve. Whatever version they use must be able to co-exist on Netware and share the same database. Can you help?

DISCUSSION -----

We haven't found a solution that is compatible with B-trieve files. We spoke with Novell and found that they have nothing planned and don't know of any compatible Macintosh solutions. There are b-tree libraries for Macintosh, but they aren't compatible with B-trieve files.
