A/UX 2.0.1: General Information

DISCUSSION --

A/UX 2.0.1 is an incremental upgrade release to A/UX 2.0. It was
produced primarily to add support for the Macintosh IIsi.
A/UX 2.0.1 runs on all Macintosh models that support A/UX. There is no
CD version of the upgrade, however there is a CD available that contains
the full A/UX 2.0.1 release

Benefits and Features

• Supports the Macintosh IIsi (with FPU installed)
• Supports multiple monitors on one Macintosh via the "Monitors" CDEV
• Supports adjustable mouse tracking via the "Mouse" CDEV
• Includes MacX 1.1
• Includes new version of the awk programming language
• Includes new version of the Korn shell, ksh-88
• Supports Macintosh System Software 6.0.7
• Is IEEE standard POSIX 1003.1-1990-compliant
• Includes version 5.65 of sendmail
• Includes changes to the A/UX header files, which provide function prototypes
  and ANSI symbol definitions for third-party ANSI C compilers
• Has asynchronous serial support

- Supports the use of function keys in CommandShell
- Mounts Macintosh HFS CD-ROM volumes to the desktop while logged in

CD-ROM Note

To properly operate an AppleCD SC, the Apple CD-ROM INIT must be installed in the System Folder of the Macintosh startup volume, and the AppleCD SC must be powered on at startup.
