Macintosh Portable: Dialing an Internal Modem

=====================================================================

Article Created: 6 February 1991

TOPIC -------------------------------------------------------

I am having problems using the Communications Toolbox, the Apple Modem
Tool, and MacTerminal 3.0 on a Macintosh Portable.  I am unable to
establish connection to the Macintosh Portable's internal modem when I
select "Open Connection" from the menu.  However, when I leave the phone
number field blank in the Apple Modem Tool's connection dialog box, I have
no problems establishing a connection with the internal modem.

DISCUSSION -------------------------------------------------

We suspect that your problem is caused by an improper setting in the
connection dialog box of the Apple Modem Tool.  Be sure you've selected the
Macintosh Portable Data Modem 2400 in the "Modem:" popup menu at the bottom
of the "Connection Settings" dialog box.  When we chose a different modem
type under this popup menu, we duplicated the problem you describe.
