System 7: Runs on all Macintoshes

=====

Article Created: 28 February 1991

Article Change History

-----

08/17/92 - REVIEWED  
• For technical accuracy.

TOPIC -----

Does System 7 run on the Macintosh Plus, SE, Classic and Portable (the ones with a Motorola 68000 microprocessor)?

DISCUSSION -----

Yes. System 7 runs on all Macintosh computers that have at least 2MB of RAM, though 4MB of RAM is recommended. With the exception of the expanded memory capabilities, System 7 runs in its entirety on Macintosh Plus, SE, Classic, and Portable.
