System 7: Compatibility with Third-Party Routers and Gateways

=====================================================================

Article Created: 8 March 1991
Article Reviewed/Updated: 8 August 1994

TOPIC -----------------------------------------------------------

Do third-party routers and gateways work with System 7?

DISCUSSION ------------------------------------------------------

Yes.  Most third-party routers and gateways don't actually run on a Macintosh
computer, so the system software version is irrelevant.  What is relevant is
whether the router or gateway supports AppleTalk Phase 2.  In this area, all
major router and gateway vendors offer products that support phase 2.

A partial list of major vendors includes 3Com, Alisa Systems, Engage
Communications, Cayman Systems, Information Presentation Technologies, Focus
Enhancements, Inc., Pacer Software Inc., and Shiva Corporation.

Article Change History:
08 Aug 1994 - Removed Dove Computer from list of vendors.
25 Aug 1993 - Removed InfoSphere from list of vendors.
27 Jul 1993 - Company title updated from Focus Enhancements to Focus
              Enhancements, Inc.
02 Sep 1992 - Reviewed for technical accuracy.
22 Jun 1992 - Remove reference to Solano Products.
