TOPIC -------------------------------------------------------------

Is Inter•Poll compatible with System 7?

DISCUSSION --------------------------------------------------------

Yes.  Inter•Poll version 1.0 is mostly compatible with System 7, and version
1.0.1 is fully compatible.  The update to Inter•Poll is free and the software
is posted on AppleLink.  Users should upgrade the Inter•Poll software after
installing System 7. Inter•Poll will work with both System 7 and System 6
systems over the network.

Inter•Poll will work with both System 7 and System 6 systems over the network.
The Responder functionality is now built into System 7, and installing System
7 removes the Responder extension from a System 6 system. If a System 6.0.x
Mac is upgraded with System 7 printers drivers, the network administrator
using Inter•poll (Apples network administrator software) will get a blank line
for that system's LaserWriter driver version number.  There is no problem
viewing System 7 drivers on System 7.0 Macs. The Sys 6 responder can't read
the System 7 driver resources.
