A/UX 2.0.1: Fixes "ls -F" Bug

=====

Article Created: March 9, 1991

Article Change History

08/31/92 - REVIEWED

- For technical accuracy.

TOPIC -----

In A/UX 2.0, ls -F should display the current directory's content appending *, /, @, to denote executable, directory, and symbolic link.

I linked a directory to another symbolic link, but when I typed in ls -F, I see xxx/ rather than xxx@. Although when I typed in ls -l, I can see the symbolic linked directory is linked -> to another directory.

DISCUSSION -----

This is a bug in A/UX 2.0 that has been fixed in A/UX 2.0.1.
