Responder: When It Renames System at Startup

=====

Article Created: 19 March 1991
Article Last Reviewed: 14 August 1992
Article Last Updated: 14 August 1992

TOPIC -----

The Responder on my Macintosh LC makes me rename my computer every time I start it. I am running system software 6.0.7. Why does this happen?

DISCUSSION -----

The first thing is to make sure you're using at least version 1.1.1 of Responder (actually, 2.0.x is the most recent version).

The next thing to check is the Get Info menu item in the Finder to see if the System file is locked. Responder writes the name of the client Macintosh to a resource in the System file. If the System file is locked, Responder is unable to make a permanent change to the System file.
