LaserWriter: Turning It Off versus Leaving It On

=====

Article Created: 29 April 1991
Article Last Reviewed:
Article Last Updated:

TOPIC -----

Is it better to leave my LaserWriter on all the time or to turn it off?

DISCUSSION -----

Generally speaking, any circuit will last longer if it is not turned on and off a lot. Switching the power decreases the life of electrical components due to the stresses of heating and cooling.

In our offices we have LaserWriters powered on for months at time. Some have been on for over a year with no need for increased maintenance.
