LaserWriter IINTX: ROM Upgrade and Font Rendering

==

Article Created: 25 March 1991
Article Last Reviewed: 8 June 1992
Article Last Updated: 8 June 1992

TOPIC ---

Does the new version of PostScript on version 3.0 of the ROMs on the
LaserWriter IINTX speed up Font rendering as does the new PostScript in the
Personal LaserWriter IINT?

DISCUSSION --

The new version of PostScript for the LaserWriter IINTX does not improve
font rendering in most operational modes. The major differences between
the 3.0 and older ROMs are:

• Software switching from LaserJet emulation to PostScript
• Font cleanup in LaserJet emulation
• Better disk management routines
• PostScript 51.8.
