AppleShare PC: Incompatible with Windows 3.0

=====

Article Created: 22 March 1991

TOPIC -----

I am using Microsoft Word under Windows 3.0. When I try to print to the AppleShare Print Server, I get the error:

Undefined; Offending Command:PS-Adobe_2.0

and the print job cancels.

DISCUSSION -----

AppleShare PC and Windows 3.0 are incompatible and, unfortunately, there is no known workaround. You may be able to intermittently gain access to either print or file services with this configuration, but it is not stable.

On a side note, Farallon has since taken over the LocalTalk PC Card from Apple and has introduced new software for the card that is compatible with more PC programs than ever before. This may be a solution. Search under "Farallon" for the phone number and address of this third party company.
