LaserWriter IINTX: Trouble Initializing Attached Hard Drive

=====

Article Created: 15 July 1990

TOPIC -----

My LaserWriter IINTX is connected to an Apple 40SC Hard drive. My hard drive's SCSI ID is set to 5 and is properly terminated. When I attempt to initialize the hard disk using the LaserWriter Font Utility, the initialize button is always greyed out.

DISCUSSION -----

Be sure that you have:

- Connected the drive to the 50-pin SCSI connector instead of the DB-25 port serial connector on the I/O board.
- Not connected your computer to the same SCSI bus as the printer and the hard drive.
- Let the drive become ready before turning on the LaserWriter IINTX.

If all the above are correct, you may have a bad LaserWriter IINTX controller or hard drive mechanism.
