DAL: Insert Command Blocks Other Users

=====

Article Created: 12 August 1991

TOPIC -----

I am using DAL, using the same account name as other users in my group. When one user does an insert, no one else can do anything (no selects, for example) until that person finishes the insert and does a commit.

DISCUSSION -----

Because all of the users are using the same account name, the system freezes until someone finished the insert command. To ensure data integrity, DAL locks the database until the command is completed. The only solution is to provide each user with a unique account.
