TOPIC -----------------------------------------------------------

The installation instructions for MacDFT refer to a "file transfer AID"
that has be enabled.  I can't find this in any of the configuration options
for MacDFT.

DISCUSSION ------------------------------------------------------

The "file transfer AID" is found on a 3174 controller and needs to be
enabled for you to do file transfer.  To enable this, set option 125, bit 6
to 1.
