System 7: Error Type -192 Appears when Removing Fonts

=====================================================================

Article Created: 19 August 1991

TOPIC -----------------------------------------------------------

While trying to remove fonts from the System suitcase, a dialog box appears
saying that the system is preparing to move them.  It also shows the number
of fonts.  Then this error message appears: "The command could not be
completed because a type -192 error occurred."

DISCUSSION ------------------------------------------------------

This error message is being generated, because you have a SAM (Symantec Anti
Virus for the Macintosh) version earlier than 3.0 installed.  This version of
SAM recognizes that the System file is being altered, but doesn't know why.
Just upgrade to the latest version.
